Improvement Plan After Skype Review	1. Put more attention on priority. Because I have come up with many merits, but I can't implement all these features for a short time, so I need to focus on the most important feature that I want to implement. 2. Try to think harder and make my software more useful and valuable. If I think more, I believe I can find other more useful and valuable features or merits which can help the software user to make more profit by using the software. 3. Try to understand the real meaning of merit and describe all my merits more precisely		
Improved Result	1. I sorted and rearrange all my merits and points of merit by priority from high to low 2. I come up with more function points which can help software user. ① Show extra information for every menu item if needed in order to attract more customers. ② Make discount reservation in order to save discount setting time. ③ Discount for specific orders. ④ Show food list by available state. ⑤ Order by discount percent. ⑥ Quick order for food in discount package. ⑦ Discount for specific order. ⑧ Online customers can see order history. ⑨ Food inventory management(optional, depends on real business).		

⑩Figure for category selling ratio.

⑪Figure for category selling trend.

3. I think I got the idea of merit: a merit is an advantage that you can offer to your software user and it can help the user to make more profit, a merit may include several function points and may be a part of function module, but it may not include all function the module can provide. So I rewrote my catalog in order to state my merits more precisely.
